CHICAGO AREA TIMEX USERS GROUP

MEMORY MAP

C.A.T.U.G. CLUB OFFICERS

Here is the list of 1995 club officers and how to contact them. Our club has three strong SIGS, TS2068, Z88 and QL. If you have questions about either of these fine machines, or even the ZX81/TS1000/TS1500, call one of the officers.   C=312, S=708.

POSITION	NAME	PHONE	PRIMARY FUNCTION
President	Nazir Pashtoon	S439-1679	The buck stops here...
Vice-President	Steve Cooper	S968-3553	Meeting Planning, etc.
Secretary	Larry Sauter	C763-5383	Records and Reporting
Treasurer	Phil Kwitkowski	S584-6710	Dues and Purchasing
Editor	Bob Swoger	S576-8068	Newsletter, BBS, etc.

CLUB MEETINGS

The Chicago Area Timex Users Group meets on the THIRD Saturday of each month at the home of our Editor, Bob Swoger, from 1:00 to 5:00 PM. Bob's home is located at 613 Parkside Circle in Streamwood, Illinois near Elgin. Bob should always be contacted evenings at 708/837-7957 to confirm the meeting schedule.

TREASURY NOTES

The balance as of May 1, 1995 is $495.20 Our current paid membership stands at 19.

Phil Kwitkowski, Treasurer
Chicago Area Timex Users Group

SECRETARY'S NotePad

MARCH 18, 1995

Members present: Abed Kahale, Cy Herre, Phillip Kwitkowski, Jeff DeCourtney, Bob Swoger, Nazir Pashtoon, Larry Sauter, and Bobby Muth.

Meeting began at 2:15 P.M. Gary Lessenberry has some half height disk drives for sale and Phil Kwitkowski is going to purchase all three of them. Phillip also has a RAM disk courtesy of Joan Kealy and he is happy with it. He wished for a color monitor and now he has three. Joan now has a couple of years of Update! as a gift from Phil in return. After seeing the 2068 on the monitor, Phil says the 2068 needs to be adjusted and Nazir suggested that for about $2.00 he could go RGB and everything will be a whole lot better.

Bob Swoger has been programming a screen dump program that is rather unique and beautiful in that it produced a very large picture of Brooke Shields printed on an EPSON MX-80 printer that the manual says will not print graphics. It took approximately 20 to 30 minutes to print and 2 or 3 hours to program. Bob knew he had it right when it started to write giant letters from the program listing during LPRINT. If Abed can transform it into machine code, it won't take so

long to print a picture as it now does. Bob has finished the software for LogiCall version 6.0 and he is working on the manual for its use. It will be available at RMG and Mechanical Affinity for $15.00 just before the Dayton ComputerFest.

Tasword Two for LogiCall V6.0 will save and load from tape whereas before it would load only.

Don Lambert sent Nazir some Zebra controllers that were intermittent and Nazir was finally able to repair them since they would work if placed on their side and would fail to work when placed upright.

The last newsletter from LIST brought up the fact that all current computers in existence with a clock and calendar on board will have a hard time when the year reaches 2000 because there has been no provision for changing from 19 to 20 in the computer calendar. That doesn't apply to the Timex TS2068 because it has no clock or calendar. Sinclair ZX machines win again!

Jeff DeCourtney is moving to New Mexico because his folks are moving there to Albuquerque on the North East side. We wish him good luck in getting a new job there and settling down there.

Bob got Print Factory and was disapointed that he could not produce all the great looking pictures that TTSUC could do. He thinks that a bunch of files are missing. Can any of our readers supply Bob with a list of the files that should be included with the Print Factory product? Sync Link used the Print Factory to produce the beautiful covers on their newsletters.

The meeting was adjourned at 3:43 P.M.

April 22,1995

Members present: Bob Swoger, Nazir Pashtoon, Jeff Decourtney, John Donaldson, Larry Sauter, Abed Kahale and Phillip Kwitkowski.

Bob received a letter from Mr. Paul Holmgren with a check enclosed for the T/SNUG portion of the SNUG assets and a list of names to give the people a choice of a subscription to ZXir QLive Alive! publication, if that be their wishes. Our heartfelt thanks to Mr. Holmgren.

Bob helped a Marie Kendall with a problem she was having and it was solved very easily. She was having a problem with her taxes on VU CALC and her large printer which wouldn't print in vertical, but would print horizontally. Bob dropped her a note telling her to use VU CALC to Tasword to print out the data and it worked for her very nicely. Bob also included a new LarKen instruction manual that is very nicely laid out.

John McMichael from Wyoming has some video digitizer boards and some video cameras and color to gray scale converters to facilitate printing stored video from TV and camcorders to a storage spot on the 2068 to be printed on the large printer.

The meeting was adjourned at 4:08 P.M.

Larry Sauter, Acting Secretary
Chicago Area Timex Users Group

INPUT/OUTPUT

Les Cottrell writes: I am enjoying the big keyboard on my TS2068. I have used my son's color ink jet to make key legends, but I haven't finished the mask yet. Function first, then pretty!

read there will only be from
other TIMEX users. All SIGs
share the same bulletins.

ITEMS FOR SALE THROUGH THE CLUB

NAP_Ware (Nazir A. Pashtoon's
new endeavor) announces the
availability of all Timex or QL
PAL (Programmable Array Logic)
chips. If interested, call him
evenings on 708-439-1679.

SPECIAL DEALS AND BUYS

So you like to fly? The 747
Flight Simulator for Spectrum
by Derek Ashton of DACC sold
over 40K copies in EUROPE.
Requires Spectrum Emulator. At
this time supplied on LarKen
SSDD disk only for $10 which
goes to Derek Ashton, now
working at MOTOROLA with Bob
Swoger. Call in requests to Bob
at W708-576-8068 H708-837-7957

ARTICLES

In order to let the community
know that there are plenty of
active members out here in the
mid-west, we wish to run
articles on each of our members
and let you know what sort of
things they are using their
Sinclair machines for. We will
use RLEs to let you see their
faces and maybe even their
computer set-ups.

MEET JEFF DECOURTNEY

Jeff DeCourtney joined CATUG in
the Spring of 1994 while he
lived in Elmhurst. In all that
time he only missed one
meeting! Though his interest at
the time was in the
ZX81/TS1000, a TS2068 was
presented to him by the club.

His present main activity with
the TS2068 is exploring every
program he can get his hands on
available on from tapes,
magazines and books. Geometric
and graphic displays are his
present delight. As accessories
became available Jeff improved
his collection.

At this time Jeff uses a color
monitor, G.E. data tape deck,
original Sinclair joystick and
TS2040 printer. Jeff has been
unable to acquire a disk drive
interface for his TS2068 so far

as he has relocated to Albuquerque, New Mexico.

When he locates a job there, he hopes to acquire a large printer with interface as well as a disk drive interface. We have yet to hear from him at his new location. An RLE of Jeff is in the Club BBS. Download JEFF.RLE

LIST! Are you LISTening?
by
Bob Swoger

In his June issue of QL Corner, Bob Gilder wrote about Ruth Fegley having "oxidation problems on the interface pins and by pressing the interface towards the QL body tends to remove the oxidation." He also said Bob Malloy four computers with the same symptoms – one or more of the socketed IC's had to be reseated into their respective sockets and the QL's then operated as they should. Also, the Keyboard 90 interface also had to be reseated into its respective socket.

Bob then stated "periodically, all plugged-in devices such as interfaces and IC's should be partially removed and then pushed back into their respective sockets for flawless computer operation without power on!"

Bob!, didn't you get to read NTN Volume 7 Number 5? It states "If you are having trouble with ICs in IC sockets, clean them with tuner cleaner if you wish. Then put some mineral oil in a saucer and dip the IC pins into the mineral oil before inserting the IC into the socket. The IC will go in so much easier!" Earlier in the article it said "Tuner cleaner just doesn't do the job because after the cleaning, no lubricant is left behind so corrosion will set in, not so with mineral oil. Oxygen can't get to the metal any more so

the electrical contact lasts for many years."

Those ICs and connectors should have been installed with high viscosity mineral oil (Squib comes to mind), a laxative obtained at the corner drug store and applied with a tooth pick on the connector or by placing the ICs in a bowl with just a little mineral oil at the bottom as describe in the NTN7.5 issue. Someone at Motorola came to the realization that if mineral oil could keep people cleaned out that in might work on connectors and, I don't know why, but it did!

I'm afraid that Bob Malloy and Ruth Fegley will be back time and time again until mineral oil is used on those pins and connectors. I give you this information with 30 years experience at Motorola as we have used this trick to keep our connectors from going intermittent and there are no more intermittent connections here in CATUG country anymore!
GET OUT THE MINERAL OIL!

Saving TS2068 Programs
by
Bob Swoger

Marie Kendall asked how to completely save a TS2068 program. Some programs in to LogiCall collection of drives have such saves. VU-CALC, VU-FILE come to mind when one thinks of programs that has start up screens to contend with.

Let us take VU-CALC for example. What this program has to save all at one moment is the BASIC driver VUCALC.B1, the screen file vc.C$ and the machine code program vc.C1. At the moment of the request to save the program, the BASIC driver and the machine code program are both in memory but the start-up screen is not!

It was decided that the easiest way to save the whole program when the user might have only one disk drive would be to have the user start the save with the original disk in the drive. The screen could then be bought into memory. Once that was accomplished, the user could put the destination disk into that same drive and complete the save routine with a simple press of the ENTER key. To save RAM space, it was decided that the save instructions would be placed in the manual and not in the program! (Sorry for that inconvenience, folks!) The following statement was put into the manual:

"Most users like to have a separate disk to store VU-CALC and VU-FILE data along with a copy of the application. Both of these drivers have a unique save routine which allows you to save the entire program to another disk. When you select the option to save the program, the save routine calls the screen code into RAM and, **WITHOUT TELLING YOU**, waits for you to press ENTER to proceed with the save. Before pressing ENTER you can put a new disk into the current drive, press ENTER and the entire program (driver, machine code file and screen file) will be SAVEd on the new disk."

To permit the user to save this program to disk I had to set up a menu in BASIC to which the machine code program could be directed. With VU-CALC running and the menu bar at the top of the screen, #q is the way out to the SAVE menu. When the user selects the option to save the program, the user response directs the program pointer to line 9992. The SAVE routine looks something like this:

9992 RANDOMIZE USR 100: LOAD "v c.C$"SCREEN: PAUSE 0: RANDOMIZE USR 100: SAVE VUCALC.B1" LINE 1 : RANDOMIZE USR 100: SAVE "vc.C $"SCREEN: RANDOMIZE USR 100: SA VE "vc.C1" CODE 32768,1048

9998 RANDOMIZE USE 100: LOAD "L .B1"
9999 SAVE VUCALC.B1" LINE 1: RA NDOMIZE USR 100: LOAD "vc.C$"SC REEN: SAVE "vc.C$"SCREEN: SAVE "vc.C1"CODE 32768,1048
